SONOBIOPSY™ CATHETER

Perform two procedures with one device.

Sonohysterography & Biopsy

Goldstein

SONOBIOPSY™ CATHETER

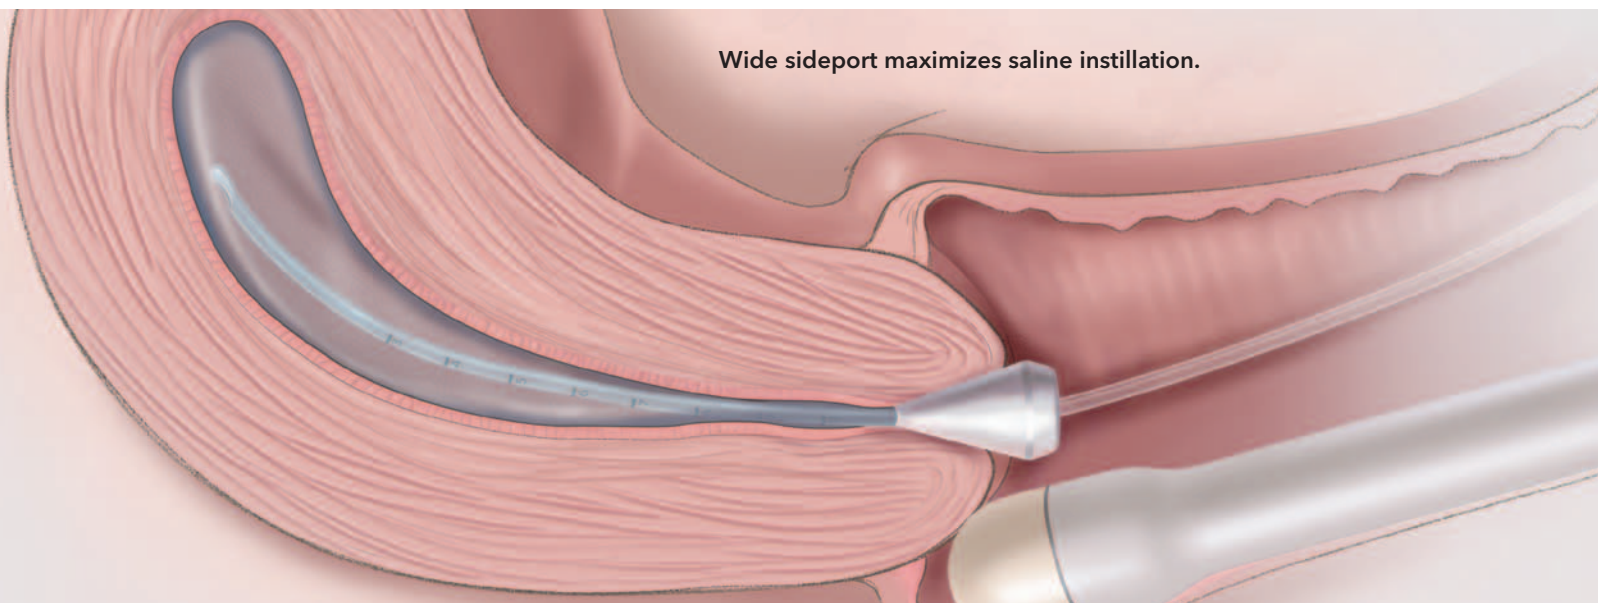

Improve the visualization of the uterine cavity and obtain an endometrial biopsy.

The Goldstein SonoBiopsy Catheter allows physicians to perform both sonohysterography and endometrial biopsy in one procedure, sparing the patient the discomfort of two speculum placements. This specially designed catheter has a round, closed tip that makes it easier to access the uterus and has a wide sideport that facilitates a seamless transition between the instillation of saline solution and the aspiration of endometrial tissue.

Cook Medical—simplifying procedures for patients and clinicians.

Sonohysterography

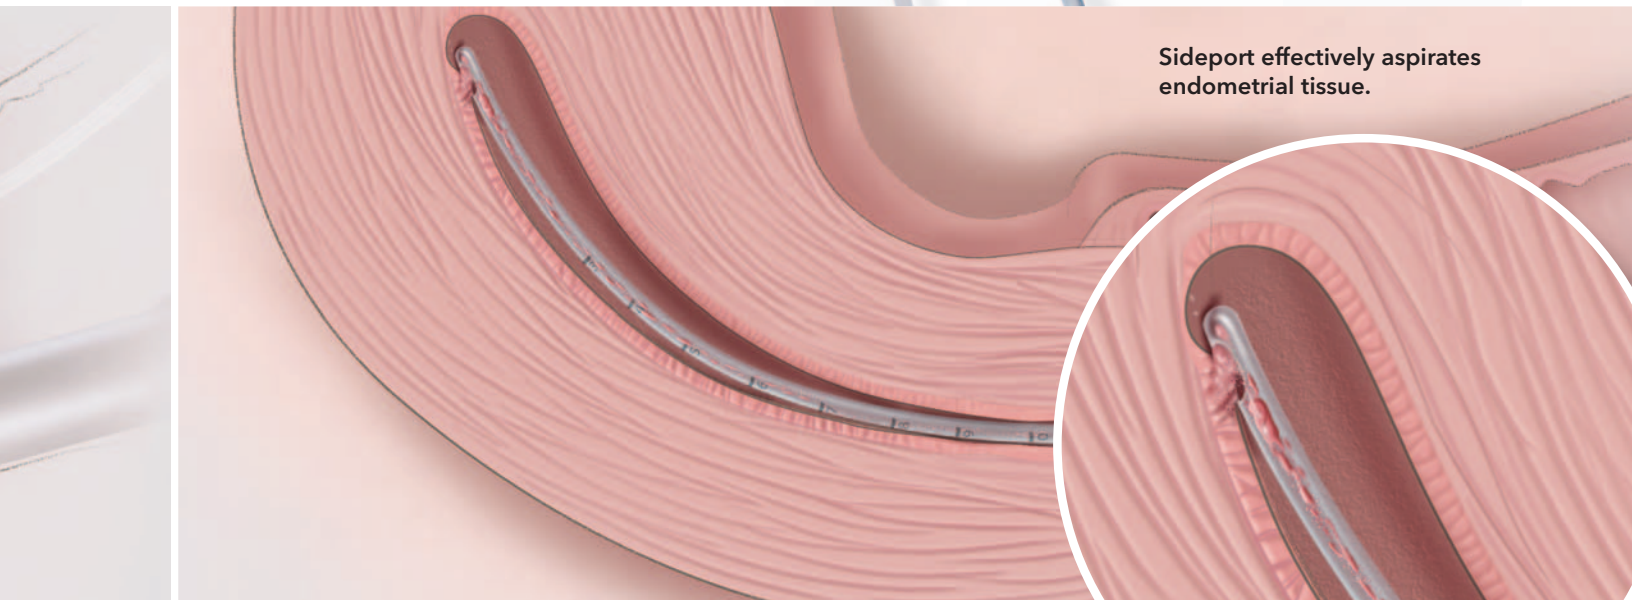

Wide sideport maximizes saline instillation.

The Goldstein SonoBiopsy Catheter is conveniently marked in 1 cm graduations up to 10 cm to indicate proper positioning. The catheter also features an adjustable acorn positioner that fits snugly into the cervical os, minimizing leakage.

Biopsy

Sideport effectively aspirates endometrial tissue.
