BILIARY STENT

Shaping the future of biliary drainage, this plastic stent is distinguished by its anatomical design, which enhances positioning in the bile duct.

- Anatomical shape for enhanced positioning
- Tapered tip facilitates smooth cannulation
- Proximal and distal flaps help minimize migration
- Polyethylene material delivers pushability and softness
- Simplify inventory management and enhance procedural efficiency with stent sets, including pushing and guiding catheters

**COOK** MEDICAL **Cotton-Leung**<sup>®</sup>  
BILIARY STENT

The subtle, natural curve of the Cotton-Leung Biliary Stent enhances its introduction and positioning capabilities, making it the stent of choice for a variety of clinical needs.

- Available in the widest range of sizes of any stent
- Gentle curved shape adapts to bile duct
- Tapered tip for smooth cannulation
- Proximal and distal flaps help minimize migration
- Polyethylene material delivers pushability and softness
- Simplify inventory management and enhance procedural efficiency with stent sets, including pushing and guiding catheters

MEDICAL

# Cotton-Leung<sup>®</sup>

SOF-FLEX<sup>®</sup> BILIARY STENT

Soft on tissue, strong on results. Naturally curved and made of a pliable material, the Cotton-Leung Sof-Flex Biliary Stent is designed for improved introduction and positioning capabilities.

- Sof-Flex is a “soft” pliable radiopaque material that enhances fluoroscopic visibility
- Available in a variety of sizes to meet patients’ needs
- Gentle curved shape adapts to bile duct
- Tapered tip for smooth cannulation
- Proximal and distal flaps help minimize migration

## BILIARY

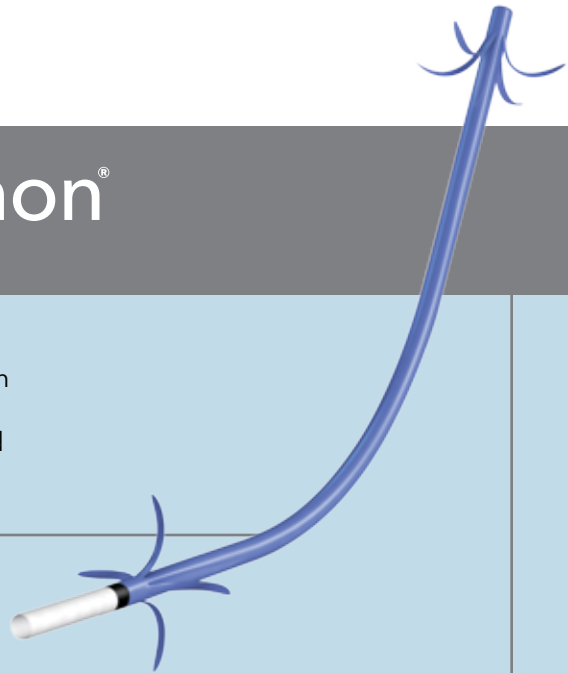

# Fusion<sup>®</sup> Marathon<sup>®</sup>

ANTI-REFLUX BILIARY STENT

The next solution for biliary occlusion. The Marathon Anti-Reflux Biliary Stent is the only stent that offers an anti-reflux valve for reduced duodenal reflux and potentially increased bile flow.

- Unique valve permits closure by duodenal pressure, facilitates opening under bile flow
- Valve maintains antegrade flow of bile due to bile pressure and may even be increased due to a siphon effect
- Significant reduction in retrograde flow of fluid and fibers

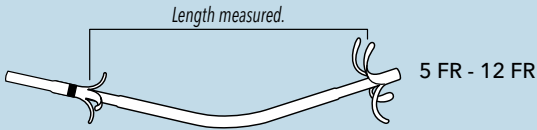

*Image courtesy of Kulwinder Dua, M.D., Medical College of Wisconsin, Milwaukee, WI*

# Fusion<sup>®</sup>OASIS<sup>®</sup>

ONE ACTION STENT INTRODUCTION SYSTEM

Streamline plastic stenting procedures with Fusion OASIS. Accurately reposition or remove plastic stents while maintaining a secure wire guide, reducing procedural steps and saving valuable time.

- Fusion capability allows plastic stents to be repositioned, recaptured before deployment or removed entirely while maintaining ductal access
- Compatible with a wide array of our exceptional plastic stents
- Deliver multiple stents without recannulation, reducing procedural steps

# OASIS<sup>®</sup>

ONE ACTION STENT INTRODUCTION SYSTEM

Whether you choose a pre-loaded Cotton-Leung Stent or ST-2 Soehendra-Tannenbaum, Cook's OASIS One Action Stent Introduction System delivers fast, efficient stent placement that can streamline your plastic stenting procedures.

- Single-step delivery enhances efficiency and saves time
- Preloaded with Cotton-Leung or ST-2 Soehendra-Tannenbaum stents to maximize efficiency
- Radiopaque bands on introducer enhance fluoroscopic visualization during placement
- Tapered guiding catheter dilates stricture prior to stent placement

# ST-2 Tannenbaum<sup>®</sup>

BILIARY STENT

The Teflon<sup>®</sup> stent material in our ST-2 Soehendra-Tannenbaum Stent is formulated to enhance patency with low surface friction to optimize flow.

- Gentle contour facilitates proper positioning in bile duct
- Proximal and distal flap design minimizes stent migration
- Teflon material combines smoothness with pushability
- Available in a wide range of sizes

# Solus<sup>®</sup>

## DOUBLE PIGTAIL STENT WITH INTRODUCER

The Solus Double Pigtail Stent is supple yet strong and completely radiopaque, making it an innovative solution for biliary drainage. For the ultimate in flexibility and strength, choose the Solus solution.

- Sof-Flex is a “soft” pliable radiopaque material that enhances fluoroscopic visibility
- Radiopaque markers enhance fluoroscopic visualization to facilitate proper positioning
- Double pigtail configuration minimizes migration
- Multiple side holes for efficient drainage
- Packaged with one-step introducer to simplify inventory management and enhance procedure efficiency

Set includes stent, pushing catheter, guiding catheter and pigtail straightener (if applicable). Recommend Tracer Metro®, sold separately.

ZSS

When performance is essential, choose the Zimmon Biliary Stent. This double pigtail design minimizes stent migration while side holes enhance duct drainage.

- Double pigtail configuration minimizes migration
- Tapered tip facilitates smooth cannulation
- Polyethylene material delivers pushability and softness
- Simplify inventory management and enhance procedure efficiency with stent sets, including pushing catheter

Set includes: Stent and 170 cm pushing catheter. Components available separately.

## ZSO

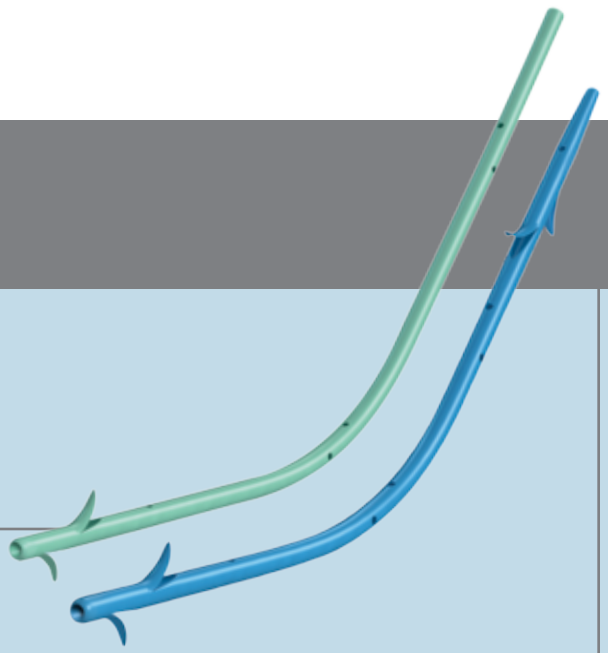

## ZEBD

With its contoured shape and offset flaps, the Geenen Pancreatic Stent is designed for optimal positioning with a minimum of stent migration.

- Spiral side holes for enhanced drainage
- Tapered tip for smooth cannulation
- Contoured shape facilitates proper positioning
- Offset flaps minimize migration
- Polyethylene material delivers pushability and softness
- Simplify inventory management and enhance procedure efficiency with stent sets, including pushing catheter

SOF-FLEX<sup>®</sup> PANCREATIC STENT

The Geenen Sof-Flex Pancreatic Stent, made of a strong yet flexible material, is designed to gently take the shape of the duct instead of forcing the duct to take the shape of the stent. Available with and without internal ductal flaps to meet all of your clinical needs.

- Spiral side holes for enhanced drainage
- Contoured shape facilitates proper positioning
- Offset flaps minimize migration
- Sof-Flex is a “soft” pliable radiopaque material that enhances fluoroscopic visibility

## PANCREATIC WEDGE STENT

Designed to conform to the duct instead of forcing the duct to conform to the stent, Johlin Pancreatic Wedge Stents are made of flexible, yet strong Sof-Flex material. Available in a variety of sizes and can be smoothly delivered with the Wedge Stent Introducer.

- Sof-Flex is a “soft” pliable radiopaque material that enhances fluoroscopic visibility
- Wedge shaped distal end facilitates entrance into duct and minimizes stent migration
- Drainage holes allow drainage of lateral branches of the pancreatic duct
- Includes Wedge Stent Introducer, designed specifically for the Johlin Stent

## JPWS

The pancreatic duct demands specialized care; Zimmon Pancreatic Stents are uniquely designed to meet these specific needs. The pigtail retention flap stent design aids in maintaining its position in the pancreatic duct.

- Duodenal pigtail (and optional ductal flap) to minimize migration
- Spiral side holes (optional) for enhanced drainage
- Tapered tip for smooth cannulation
- Radiopaque marker facilitates proper positioning
- Polyethylene material delivers pushability and softness
- Available in a variety of French sizes to meet specific procedural needs
