

Expect disease-specific solutions for type B dissection.

Zenith® Dissection

ENDOVASCULAR SYSTEM

You can now offer your patients the first disease-specific endovascular solution for the treatment of type B aortic dissections. Zenith® Dissection:

- Seals the entry tear, then expands and supports the true lumen
- Maintains blood flow to visceral branches with its open stent design
- Reduces the risk of aortic arch erosion and trauma since it has no bare top stent or anchoring barbs
